PostgreSQL 10.2 Released!

The PostgreSQL Global Development Group has released an update to all supported versions of our database system, including 10.2, 9.6.7, 9.5.11, 9.4.16, and 9.3.21.

This release fixes two security issues. This release also fixes issues found with VACUUM, GIN & hash indexes, parallel query, logical replication, and other bugs reported over the past three months. All users using the affected versions of PostgreSQL should update as soon as possible.

> FEATURED USER

[With PostgreSQL] we have been quite successful in growing the databases as the company has grown, both in number of users and in the complexity of services we offer.
